TYPES OF HANDPHONE LOCKERS

Finding the right storage is essential for securing mobile devices in your workplace, school, or any restricted area. At Asia Furniture Co., we offer several handphone locker configurations to meet your specific operational needs. Let's explore the range to find the perfect fit for your facility.

Standard Solid-Door Lockers

These lockers offer maximum privacy with a sleek, uniform look. If discretion is key, their solid doors keep all contents completely hidden.

Acrylic Window Lockers

These are perfect for fast-paced settings where you need accountability. The clear acrylic panels allow your management or security team to perform quick visual inspections without opening each unit.

Charging Station Lockers

These lockers combine security with convenience. They come equipped with built-in charging ports, so users can power up their devices while keeping them safely stored. This ensures your team's phones are always ready to go.

Hybrid/Mixed Compartment Lockers

For the ultimate versatility, these units combine standard mobile phone slots with larger compartments for tablets or laptops. This all-in-one system is ideal for modern offices and agile workspaces.

Mini lockers

For areas needing storage of phones and other small items, compact mini lockers provide a flexible solution that fits perfectly into tight spaces like staff rooms or even classrooms.

Ventilation	Standard louvers	Perimeter ventilation	Enhanced cooling vents	Enhanced cooling vents

INSTALLATION, PLACEMENT, AND MOUNTING

Choosing the right spot for your phone lockers is just as important as the lockers themselves. We offer flexible solutions to fit any space.

Wall-Mounted Configurations: If you're short on floor space, our wall-mounted options are a great choice. You can anchor smaller units (with 4 to 12 compartments) directly to the wall at eye level, which keeps walkways clear and provides easy access for your team.

Freestanding Towers: For larger needs, our high-capacity units (20 to 50 compartments) are best installed as freestanding towers. To ensure they're completely stable, we secure these towers with heavy-duty metal bases to prevent tipping.

When planning your layout, consider placing lockers at key locations like security checkpoints, building entrances, or staff breakrooms.

This strategic placement helps enforce your "no-phone" policies before anyone enters a secure area.

For academic institutions, placing these lockers near the entrance of classrooms allows students to safely store their devices during school hours.

Let us help you create a secure, streamlined, and distraction-free environment.
